SUMP
DEWA WELL

1 Minimum Detection Limit (MDL) dependent upon turbidity of sample and the volume fraction filtered. National Primary Drinking Water Regulations under EPA's Safe Drinking Water Act dictate Maximum Contaminant Levels (MCL) for asbestos at < 7.0 MFL.

2 EPA and NYSDOH Regulations require segregation of overall fiber concentration, total asbestos concentration, and asbestos concentration of those fibers >10.0 µm in length.

MFL = Million Fibers per Liter

These preliminary results are issued by IATL to expedite procedures by clients based upon the above data. IATL assumes that all of the sampling methods and data upon which these results are based, has been accurately supplied by the client. These results may not have been reviewed by the Laboratory Director. Final Certificate of Analysis will follow these preliminary results. The signed COA is to be considered the official results.
