SUBJECT:
Fwd: Enforcement of Rooftop Debris Cleaning

HI Krish: I saw another email from Nancy Jeffery concerning quantifiying accumulations of dust/debris and I know that DEP is not comfortable with the descriptions in the letters - could we say that a light accumulation is an amount less than one gram of material within a
certain homogeneous area? but in layman's terms? [one gram being less than the minimum for a bulk sample as per NIOSH Methods 9002 (PLM) or 9000 (XRD)] - just throwing out some thoughts..... .please let me know yours.....
