Subject: HVAC Meeting

It has taken me a while to digest the comments made at our meeting today. In essence, we are being told to advise the residents that a health risk has existed for 15 months through an unrealistic assessment and clean-up process. How can we even entertain being so irresponsible when existing data suggests just the opposite. The last thing we should want to do is throw the responsibility back to the owners and residents. We need to make immediate decisions to move the program to conclusion..

Many of the comments we heard today were easy cover your behind easy way out suggestions. We need to be the decision makers able to fulfil our roles as responsible public servants. I know you are at West Point tomorrow, but the time has come for us to collectively look this thing in the eye and move. Let's discuss ASAP.
