

DEP / BEC

2/21/02

1.

A.

1. Contact your building owner and request the information. The Department advised building owners to change filters if they found debris after 9/11.
2. No, there are professional HVAC cleaners that building owners can contact.
3. Call Center will take information from the individual and DEP will respond. The requirements for cleaning vary based on the hazard assessment.
4. Same as 3
5. In general, the occupants are responsible for cleaning their spaces. DOH guidance document available on nyc.gov

B.

1. No
2. Information not available
3. Information not available
4. DOH guidance document available on nyc.gov

C.

1. DOH
2. DOH
3. DOH
4. DOH
5. DOH
6. DOH
7. DOH

→ Question by C - Some answers can be found in press release from Health Department.

D.

1. Outdoor air samples have indicated that the air quality meets the current standards. However, if visible accumulations of debris are observed near the air conditioner's intake, the accumulations should be cleaned using vacuums equipped with HEPA filters and wet methods prior to using the A/C.
2. Refer to 1 above
3. It depends on examination of filters and manufacturer's specifications and recommendations.
4. We are not aware of any air conditioner brands that can be retrofitted with a HEPA filter.

II

All pertain to DOH

III

A.

1. DOH, ATSDR, EPA, and others
2. The OSHA PEL is 0.1 f/cc for an 8-hour day. The results of air sampling did not approach this limit. The OSHA standard is not the standard being applied to residents or occupants of the WTC vicinity. The existing more stringent re-occupancy standards are being used.
3. See 2 above

Home air purifiers and electrostatic air filters, including ionic room air purifiers, and hepa filters.

Air Purifiers And Filters offers home air purifiers and electrostatic air filters, including ionic room air purifiers, and hepa filters. Our home air purifiers reduce allergy induced headaches, fatigue, breathing problems and sleep loss. Our portable, ionic and air filters provide in home relief from asthma, hay fever, chronic cough, wheezing, sinus problems and runny nose. They also dramatically reduce sickness. Approximately 4,000 indoor pollutants commonly found in indoor air, ionized dust, pollen, and other particles from the air are removed (no particles floating in sunbeams!).

We inventory state of the art room purifiers, and electrostatic air filter models from Hepa, Honeywell and Austin help eliminate 98% of odors, including those from smoke, pets, cooking, new paint, new carpet, new furniture, petrochemical beauty products, household cleaners and appliances. Our room purifiers and air filters deodorize carpets, furniture, drapes and clothing that are affected by the indoor air pollution. We sell systems that provide total flexibility by allowing the user to adjust to room size, air quality and operating conditions. Purify the air in a room, smaller home, condo or apartment easily with one unit. This versatility is unmatched in the industry. The systems effectively destroy molds, mildew, fungi, viruses and disease-causing bacteria, sterilizing the air and surfaces for a cleaner, healthier environment, while producing invigorating, mountain-fresh air. You can say goodbye to anymore stale air smells.

Air Purifiers & Filters • Common Air Pollutants • User Tips

Home Air Purifier

indoor air purifiers that filter out airborne contaminants and odors.

Our selection of home air purifiers and air cleaners (home air filters) will help protect your health from the dangers and irritation of allergens and indoor air pollution. People are now able to breathe cleaner, safer air indoors with our room purification system.

This innovative line of air purifiers neutralizes airborne contaminants and unpleasant odors, replacing them with clean "mountain-fresh" air using natural processes. We carry a home purification system for about every person who wants to breathe cleaner air. Our air purifying cleaners remove 98% of the odors in your home. These include odors from smoke, pets, cooking, new paint, new carpet, new furniture, petrochemical beauty products, household cleaners and appliances.

Our systems offer total flexibility by allowing the user to adjust the unit to room size, air quality and operating conditions. This versatility is unmatched in the industry. Many air purifiers rely only on mechanical filtration. This system utilizes six stage purification technology and is the most advanced home air purifier available in the world today.

According to the Environmental Protection Agency (EPA) the indoor air that we breathe in our homes may be 4 to 100 times more polluted than the air in major cities like Los Angeles and Houston! Our home air purifiers can effectively clean your indoor air and help protect your family's health.

Click here to learn more about home air purifiers.

Electrostatic Air Filters

room or home air filters for airborne pollutants and contaminants.

Electrostatic air filters are specifically designed for residential as well as commercial applications. These air filters will dramatically reduce dust and dirt in your home or office. They filter out airborne contaminants that contribute to air pollution and allergies. They effectively reduce airborne pollutants such as dust, dirt, mold spores, dust mites, dust mite feces, existing pollen, and bacteria from the air. These contaminants are small enough to pass right through less efficient filters and may cause or aggravate illnesses ranging from runny noses and headaches to allergies, asthma, sinus, and other respiratory illness. These electrostatically charged air filters trap airborne pollutants such as dust, pollen, and mold spores and animal dander keeping your air conditioning system cleaner and running more efficiently. A clean HVAC system operates more efficiently and will run for a shorter period of time.

Electrostatic air filters maintain system efficiency - keep heating and cooling systems operating at peak efficiency - filter out airborne contaminants before they reach the blower and coils. Cleaner equipment saves on operating costs as well. They will pay for themselves in just two or three years compared to less efficient disposable filters. Replace the less efficient disposable Fiberglas filters with high efficiency electrostatic permanent filters which will reduce dust build up inside air ducts.

Benefits of electrostatic air filters:

- Improve the air quality in your home and reduce allergic reactions with this permanent electrostatic air filter.
- Removes more dust and dirt from the air with a higher resistance and dust holding capacity than store bought filters.
- Keeps your air conditioning system clean and operating efficiently.
- Anti-Microbial strands built right into the polypropylene weave inhibits

bacteria, germ and mold growth throughout the life of the filter. Eliminating more allergy causing agents.

- Less dust also means less dusting.
- Life time air filter - never needs replacing, just clean it every 30 days. When the filter requires cleaning simply vacuum it off and wash it with fresh water.

Room Air Purifiers

ionic room air purifier reduces air pollution and allergens.

Room air purifiers effectively reduce air pollution and allergens in your home or office. Our air purification systems cleanses the air of dust - odors - fungi - allergens - mold - mildew - chemical fumes - second hand smoke - dust mites - pet odors and dander - bacteria - pollen and static electricity from the air in your home or office.

Room air purifiers are not air filters. They are air purification systems that have the ability to purify the air in an entire home or business. Room air purifiers produce negative and positive ions uniformly up to 60 feet away from the room purifier; on the other side of walls, floors and ceilings.

Now you can experience pure and clean mountain fresh air in your home or office year round. These air purifiers use the same methods Mother Nature uses outdoors. These air cleaners have a life-span of 10 years or more running 24 hours a day!. They are easy maintenance with NO FILTERS to replace!

Air Purifiers And Filters' air purification systems are in a class of their own! Our systems provide the flexibility and versatility to adjust to many sizes of rooms and environments manually and/or automatically from a small room to 2000 square feet. Purify the air in any room, office, smaller home, condo or apartment easily with one unit. For larger spaces or multiple levels you might want to consider a second unit.

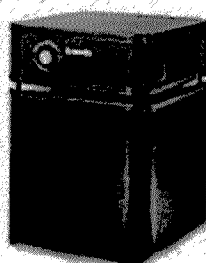

Many satisfied customers have reported dramatic benefits from the use of room air purification systems in their homes and offices. These include relief from: allergies, asthma, headaches, breathing and sinus problems, fatigue, low energy, restless sleep, second hand smoke, dog and cat allergies, mold, and household odors.

Limited Time Special Offer: "Any order for a Austin Air Jr. will receive \$240.00 of grocery coupons of their choice" or "3 days 2 nights stay" at one of 20 resort locations across the USA and Mexico" or "\$500.00 grocery coupons" or "3 days 2 nights stay for any full size Austin Air or Blueair room air cleaner.

Healthmate™: Specialty air cleaner with over 80 sq. ft. of medical HEPA, certified to remove 99.97% of airborne particles greater than 0.3 microns. Contains over 15 pounds of granular carbon and zeolite for the adsorption of odors, ozone, gasses and other harmful chemicals. Stands 23" tall and 14.5" wide. Comes with wheels for easy portability. Effectively cleans an area of 1500 sq. ft. (with normal ceiling heights). Available in Black, White, Sandstone and Silver.

Important features of all products:

• Solid steel construction

- Solid steel construction
- Powder-coated paint
- Energy saving PSC motor
- Engineered airflow creating the clean air pocket™
- 30-Day money back guarantee
- 5-Year warranty on all parts and labor
- 5-Year pro-rated filter guarantee

Austin Healthmate Plus (Superblend) - FREE Shipping in US only

Healthmate Plus™: Specialty air cleaner specifically designed for those who are chemically sensitive. Has over 80 sq. ft. of medical HEPA, certified to remove 99.97% of airborne particles greater than 0.3 microns. Contains over 15 pounds of granular carbon and zeolite for the adsorption of odors, ozone, gasses and other harmful chemicals. The carbon in this filter is impregnated with potassium iodide for the removal of additional chemicals. Stands 23" tall and 14.5" wide. Comes with wheels for easy portability. Effectively cleans an area of 1500 sq. ft. (with normal ceiling heights). Available in Black, White, Sandstone and Silver.

Austin Allergy Machine (HEGA) - High Efficiency Gas Absorption

Important Research: In 1998, research engineers at Austin Air's development labs learned that secrecy restrictions had been lifted on a **revolutionary carbon material** developed for the **British military**. This new material was developed to protect soldiers in **chemical warfare**. Many times more efficient than the regular form, this lightweight carbon weaved into a cloth could protect today's mobile infantry against most **toxic chemical poisons**.

In its research laboratories, Austin's development team developed a method for combining the carbon cloth's gas trapping properties with HEPA particles filtration. Austin's engineers dubbed their discovery HEGA - **High Efficiency Gas Adsorption**. The US Patent Office judged the development such a significant leap forward that it has now awarded a patent pending. Under this ruling, HEGA is exclusive to Austin's products.

The combined forces of HEPA to fight harmful particles and HEGA to eliminate gases brings the ordinary household victory in battle for air power. Specialty air cleaner with over 80 sq. ft. of medical HEPA, certified to remove 99.97% of airborne particles greater than 0.3 microns. A **military carbon cloth** is used in place of granular carbon, and is located after the HEPA, enabling the carbon to be more efficient. Stands 23" tall and 14.5" wide. Comes with wheels for easy portability. Effectively cleans an area of 1500 sq. ft. (with normal ceiling heights). Available in Black, White, Sandstone and Silver.
