How You Can Help

### EPA Monitoring Site:

### Church & Duane (No Longer Active)

### Asbestos Air Monitoring Data

This table shows how much asbestos EPA measured in the air at this site, on the dates and times shown. Daily summaries of this data and how it compares to the level of concern for public health are [also available](#).

EPA can measure asbestos in several ways. For these data tables, EPA is providing measurements in terms of the number of asbestos structures found per square millimeter within our air monitors (structures can include single, overlapping, and bundles of asbestos fibers). The level of concern for asbestos is based on continuous exposure to more than 70 structures per square millimeter for an extended period. **Because cleanup efforts will reduce asbestos levels dramatically over the next several weeks, EPA does not expect people exposed to this amount of asbestos to have increased risks of health problems.**

| Date       | Time                | Measurement*<br>(structures/square millimeter) |
|------------|---------------------|------------------------------------------------|
| 09/17/2001 | 8 am to 8 pm        | Not Detected                                   |
| 09/17/2001 | 8 pm to 8 am(09/18) | Not Detected                                   |
| 09/16/2001 | 8 am to 8 pm        | 16 <sup>†</sup>                                |
| 09/16/2001 | 8 pm to 8 am(09/17) | 8 <sup>†</sup>                                 |
| 09/15/2001 | 8 am to 8 pm        | 64 <sup>†</sup>                                |
| 09/15/2001 | 8 pm to 8 am(09/16) | Not Detected                                   |
| 09/14/2001 | 8 pm to 8 am(09/15) | 32 <sup>†</sup>                                |

Description of the Benchmarks, Standards, and Guidelines used to Evaluate Environmental Conditions.

\*The information contained in this database should be considered provisional and may be subject to adjustment upon final analysis.

<sup>†</sup>These results are different from the concentrations previously reported on this website. The previous results included an additional, unnecessary adjustment for the volume of air sampled. The corrected values listed now are the result of the same methods used for more recent data. The corrected asbestos concentrations are generally lower than the previously reported values, but use the correct method for calculating the effect of the volume of air sampled.

There may be gaps in daily readings because of relocated construction equipment and variations in sampling locations.

## ***Air Monitoring in Lower Manhattan***

| Site # | Date    | Location Sampled | PCM Results (f/cc) | TEMS Results (s/sq. mm) |
|--------|---------|------------------|--------------------|-------------------------|
| 1      | 9/12/01 | P11              | 0.010              | 11.25                   |

**Notes:**

PCM = phase contrast microscopy

f/cc = fibers per cubic centimeter

LOQ = Limit of Quantification

TEM = transmission electron microscopy

s/sq. mm = structures per square millimeter

Overload = Indicates that the sampling filter was clogged and the sample could not be read with laboratory analysis.

The information contained in this database should be considered provisional and may be subject to adjustment upon final analysis.
