New York, New York 10278

Dear Mr. Gair:

The collapse of the World Trade Center (WTC) towers on September 11, 2001 resulted in the depositing of dust and debris on and/or in many buildings in lower Manhattan. Recent inspections of building exteriors near the WTC site revealed that, while many of the buildings are now free of debris, other buildings still have visible deposits of material from the WTC collapse.

The City of New York believes that it is in the public interest to remove this material from the exterior of buildings in the vicinity of the WTC site. Samples collected during the inspections indicate that asbestos may be present in some of the debris. Long-term exposure to elevated levels of airborne asbestos can, in certain circumstances, cause health-related problems. The removal of this material will thereby protect against any adverse effects on air quality or public health and safety.

In addition to removal of debris from building exteriors, area residents have expressed concerns about the possible presence of debris or dust in their homes, which is perceived as a health concern. While some interior spaces have been cleaned by building owners or residents, others have not. The City believes that it is also in the public interest to institute a program of cleaning interior residential spaces, to prevent asbestos (if present) from becoming airborne, and to provide assurance to residents that their concerns are being addressed.

(A) Lower Manhattan is the financial capital of the world, and its revival is therefore critical not only to the City but to the nation as a whole. Anecdotal evidence suggests that confidence in the area's environmental safety – especially with regards to its air quality – is a primary concern for many area business executives. The exterior cleaning program outlined above seeks to address these concerns. We hope that these efforts will play an important part in the City's ongoing efforts to retain and attract area businesses.

As you well know, Lower Manhattan is also home to a growing residential community, which plays an important role in the economic health of the area as well. The efforts outlined above will encourage area businesses to stay in or return to the downtown area, and We hope that the programs outlined above will encourage residents to continue living there and contributing to the economic and social vitality of the area. This, in turn, will strengthen public confidence in the future of lower Manhattan and expedite and enhance the economic revitalization of the area.

~~4)~~

The City must also communicate these active steps that are being taken to maintain the confidence of businesses, employees, and residents in the area's environmental safety. These programs reflect the effort of the City and the EPA to address these concerns and to maintain public confidence in Lower Manhattan, and as such are absolutely essential to the area's long-term economic health.

The City therefore requests that FEMA provide the necessary funding for the hiring of contractors to perform the cleaning and/or testing of building exteriors and interior residential spaces in lower Manhattan, as appropriate.
