COMMUNITY BOARD NO. 1

CITY OF NEW YORK

Russell Goldstein
District Manager

To: Councilmember Stanley Michels

Fr: Madelyn Wils, Chair Community Board 1

Date: September 19, 2001

At my request, two highly respected asbestos and industrial chemical hygienists donated their services to test residential buildings for toxic chemicals within the National Guard perimeter. These substances have not been tested for by the EPA, DEC or DEP. Because of the reluctance of the city to give credentials to these experts, I was only able to get them into two buildings in the affected area. Their initial findings will be reported to me next week.

Since we only did testing on a minimal number of buildings it is imperative that the DEP, EPA and DEC test the dust in residential buildings for the following substances:

Asbestos
Metals such as mercury and lead
PCB's
Dioxins and furans
Lime and calcium carbonates

At a minimum, the following buildings should be tested:

176 Broadway
71 Murray Street
P.S. 234 at 292 Greenwich Street
310 Greenwich Street
110 Greenwich Street
17 John Street
395 South End Avenue
Stuyvesant High School at 345 Chambers Street
Borough of Manhattan Community College at 199 Chambers Street
247 Water Street

The air should also be monitored, since 7 World Trade Center is still burning and emitting smoke which is causing people in the area great physical distress.

The air should also be monitored, since 7 World Trade Center is still burning and emitting smoke which is causing people in the area great physical distress.

Protocol for cleaning buildings was posted yesterday. I am distressed to find out that building managers had already started the process of cleaning buildings and apartments before any information on how to do so was released. However, protocol for cleaning inside dusty apartments should also be released. It is important that people become aware of how to clean living areas such as beds and kitchens.

Thank you.
