We don't believe anyone can claim the dust is "clean" unless it is tested. Kathy C and Mike G. agreed to reclean the residue from the airshaft and we're holding them to their word. The blasting of the bricks and mortar are removing particles and there are not any assurances that this dust will not be a problem. If there is residue from the firehouse then it will be another problem to deal with.

The dust from the airshaft is still there on the widow sills and fire escapes after the rainstorm and we want it removed and trust that the EPA/DEP will follow through on their promise to reclean it.
