DISPATCHED

AUG 16 1984

WATER POLLUTION CONTROL
MAIL ROOM

August 14, 1984

Mr. James G. Carlock
Acting Manager
World Trade Center Planning
One World Trade Center
New York, NY 10048

RE: WTC 776.00 Dey Street
Escalator and Underpass,
Borough of Manhattan

Dear Mr. Carlock:

We have completed review of your plan/specification package of June 29, 1984. The drawings are consistent with those recommendations arrived at during our previous meetings.

We are returning one set of plans with some minor comments marked in red. Comments appear on Dwgs: C-7, C-9, C-11, C-12.

As you know we have received a proposal from Eli Attia Architects, in conjunction with the H.J. Kalikow Hotel. This proposal calls for some sewer modification work at the north building line of Dey Street. We had asked that they contact you regarding coordination of their sewer work with your proposal.

Their proposal originally called for relocating the sewer north of Dey Street into the building area (private property). This would have meant modification to your proposed Manhole No. 3. However, there were several problems with their scheme and it was returned to them on June 19, asking that alternatives be examined.

-2-

As things stand at this time, your proposal is consistent with previous review. As soon as final signed drawings are available, incorporating the comments returned today, you may forward them to us for approval. Please transmit three sets of final drawings and one set of final specifications (books III and later).

If you have any questions please contact Mr. Douglas Smith, P.E., at 566-5616.

Very truly yours,

FREDERICK NOVOTNY, P.E., CHIEF
Div. of Sewer Regulation &
Control, Bureau of Sewers
