Howard, I do not think we can get the landlord to buy this equipment!!! Only supply the space. You should make preparations to bid this out.

If things change and we can get the landlord to buy the equipment, we will let you know.

Jeff,

Thanks for getting back to me on this. I don't think it is currently in the landlords plan. I was asking if it can be included. The specs are not clear enough for me to bid. Some one in operations put it together for OEM, but there are to many variables. If the landlord could do it OEM could get exactly what they want. If you need another copy of the spec. let me know.

If I have to bid it out I will, but this would help!

Howard, I believe OEM asked the landlord's architect to include roof space for this weather radar in the plans. But, I am unsure whether the landlord is to buy the radar and install it, or whether we are to buy it and the landlord is simply to provide the roof space.

Via copy of this E-mail, I am asking the DCAS arechitect, Josep Dominguez, or Jerry McCarty of OEM to confirm what is in the plans for the landlord to supply and install.

Hi Lori,

Back in December I sent you a spec. for the OEM weather radar equipment and asked if it could be included in the build out. The landlord is installing to conduit and other ancillary equipment.

No one has gotten back to me on this. Could you check into it and let me know if it can or can not be installed as part of the build out. The cost is about \$40,000.

Thanks

Howie

Josep Dominguez, please reply to Howard's scheduling question.

>>> Howard Altschuler 03/25/98 01:23pm >>>

Do you know what the schedule is for this area so that I can figure out a bid schedule?
