 Long Island City NY 11101 4008

**Re Wipe Samples for Dioxins  
 P S 1 (Manhattan)  
 ATC Project No 15 19125 0340**

Dear Mr Orlan

ATC Associates Inc (ATC) is pleased to provide this report of the results of the wipe samples for polychlorinated dibenzo p dioxins (PCDDs) and dibenzofurans (PCDFs) collected on August 27 2002 at the referenced location The New York City Department of Education (DOE) requested these samples to evaluate possible contamination in the school building

#### Scope of Work

The samples were collected using gauze pads and hexane as a solvent The solvent was provided and samples were analyzed by Pace Analytical Services Inc (Pace) of Minneapolis MN a laboratory experienced in dioxin analysis The analysis was performed by modified EPA Method 8290 using combined capillary column gas chromatography/high resolution mass spectrometry

Wagdi Abdelshahid Industrial Hygienist of ATC's New York City office collected the samples consistent with generally accepted industrial hygiene practices There were inherent limitations created by constraints of time operational and work practice variability variations in contaminant concentrations and sampling and analytical accuracy The results of the sampling represent conditions found on the date the samples were collected

#### Results

ATC submitted three wipe samples for PCDDs/PCDFs to Pace for analysis Samples were taken from representative floor areas throughout the building The sample area for each sample was one square meter (1 m<sup>2</sup>) The areas sampled were

- Main Lobby
- Hallway by Room 215
- Hallway by Room 403

Mr Bernard P Orlan  
Wipe Samples for Dioxins  
P S 1 (Manhattan)

November 25 2002

Page 2

ATC Project No 15 19125 0340

Each sample was analyzed for sixteen (16) PCDD/PCDF isomers The results for each isomer were then converted to 2 3 7 8 tetrachloro dibenzo p dioxin (2 3 7 8 TCDD) equivalents by multiplying by an established equivalency factor This provides a single value (in nanograms) for the analytical results for each sample A copy of the laboratory analysis report is attached The results are shown in the following table

**DIOXIN WIPE SAMPLE RESULTS**  
**2 3 7 8 TCDD EQUIVALENTS Nanograms per square meter (ng/m<sup>2</sup>)**  
**August 27 2002**

| LOCATION /SAMPLE ID       | DIOXIN CONCENTRATION |
|---------------------------|----------------------|
| Mam Lobby / DX1           | 0 000083             |
| Hallway by Room 215 /DX2  | 0 00018              |
| Hallway by Room 403 / DX3 | 0 000045             |

The New York State Department of Health (NYSDOH) established guidelines for dioxin for the re occupancy of the Binghamton State Office Building following a PCB fire The NYSDOH guideline for dioxin on surfaces is 25 nanograms per square meter (25 ng/m<sup>2</sup>)

The concentrations on indoor surfaces ranged from 0 000045 to 0 00018 nanograms per square meter (ng/m<sup>2</sup>) The levels found in all of these samples are below the NYSDOH guideline of 25 ng/m<sup>2</sup>

It is not possible to determine when the 2 3 7 8 TCDD equivalents detected in these samples was deposited Dioxin samples were not collected from these locations prior to these samples therefore a background sample is not available for comparison purposes

It is our pleasure to provide these indoor environmental services to the NYC Department of Education If you have any questions about this report please call (212) 353 8280 extension 212

Sincerely  
ATC Associates, Inc.

James R Cohn CIH CSP  
Regional Manager  
Industrial Hygiene Division
