Interim Air Sampling Report
Thursday, October 4, 2001

New York City Department of Health contractors collected air samples on personnel actively involved in rescue efforts on or in the vicinity of the debris pile to characterize occupational exposures. These air samples were subsequently analyzed by the National Institute for Occupational Safety and Health (NIOSH). Below are the interim sampling results for Thursday, October 4, 2001.

Air Samples

Asbestos

- 25 personal air samples were collected by NYDOH contractors
- Personal sample 8-hour time-weighted average concentrations were below 0.026 fibers/cc as determined by PCM
- All short-term exposure limit samples were below the limit of detection as determined by PCM
