Re: Limited settled dust bulk sampling for fiberglass at P.S. 150M

Dear Mr. Orlan:

At your request, ATC Associates, Inc. representative Mr. Tim Amstislavskiy visited P.S. 150M located at 334 Greenwich Street, New York, NY 10013 on November 8, 2002. The purpose of the site visit was to perform a settled dust bulk sampling to be analyzed for fiberglass fiber content on areas indicated to ATC by the New York City Department of Education (NYC-DOE). These areas are the following:

- 1st Floor Lobby
- Multipurpose room
- Two random classrooms

The purpose of the dust bulk sampling is to determine if settled dust in the school contains fiberglass fibers.

As per your request, a total of four (4) settled dust bulk samples were collected from the aforementioned areas and were analyzed utilizing Polarized Light Microscopy (PLM).

Analytical results indicated that none of the four (4) collected settled dust bulk samples contain fiberglass fibers.

The settled dust bulk sampling performed was limited to testing for fiberglass in locations indicated by the NYC-DOE.

Attached please find the following:

- Settled dust bulk sample chain of custody form and laboratory results
- Laboratory and personnel certificates

If you have any questions or require additional information regarding this limited settled dust bulk sampling, please do not hesitate to contact me at (212) 353-8280 extension #211.

Sincerely,
ATC Associates, Inc.

Yiannis Efstathiou
Senior Project Manager
