**Re: Air Sampling for Hydrocarbons
P. S. 234M
ATC Project No. 15-19125-0279**

Dear Mr. Orlan:

ATC Associates, Inc. (ATC) is pleased to provide this letter report of air sampling for hydrocarbon compounds conducted on August 19, 2002, at the referenced school. The New York City Department of Education (DOE) requested this sampling prior to the resumption of classes to verify that acceptable indoor air quality is being maintained.

Scope of Work

ATC collected four (4) samples for hydrocarbon compounds (HC) at specified locations. Samples were collected for ten (10) hours using activated coconut shell charcoal tubes connected to battery-powered sampling pumps at a flow rate of 0.2 liters per minute. Pumps were calibrated before and after each sampling period. Two (2) samples were collected inside the building and two (2) samples were collected outside. One blank tube was also submitted. The samples were sent to PSC Analytical Services, Inc., an American Industrial Hygiene Association-accredited laboratory in Reading, PA. Analysis was performed by capillary gas chromatography/flame ionization detection (OSHA Method 7). A copy of the analytical laboratory report is attached.

Each sample was analyzed for a panel of sixteen (16) specific HC compounds. These compounds were: pentane, acetone, methylene chloride, hexane, chloroform, methyl chloroform, benzene, 1,2-dichloroethane, trichloroethylene, toluene, perchloroethylene (tetrachloroethylene), chlorobenzene, ethylbenzene, styrene, cumene and xylenes. In addition, two non-identified peaks, total other A hydrocarbons and total other B hydrocarbons, were reported. The A-hydrocarbons are those, such as gasoline or light alcohols, with boiling points less than that of benzene (176°F). The B-hydrocarbons are those, such as mineral spirits or petroleum naphtha, with boiling points greater than that of benzene.

Wagdi Abdelshahid and Tenzin Namgyal, Industrial Hygienists from ATC's New York City office, conducted the sampling consistent with accepted industrial hygiene sampling practices. The results represent conditions on the day the samples were collected.

Mr. Bernard P. Orlan
Air Sampling for Hydrocarbons
P. S. 234 (Manhattan)

August 28, 2002

ATC Project No. 15-19125-0279

The sampling locations were: 1st Floor Main Lobby, 1st Floor Hallway, the West Playground and the Roof.

Results

None of the HCs in the panel were present above the limits of detection for the analyses in any of the samples.

ATC appreciates the opportunity to provide this indoor air quality service to the DOE. If you have any questions concerning this report, please call (212) 353-8280 extension 212.

Sincerely,
ATC Associates, Inc.
