Interim Air Sampling Report
Tuesday, September 25, 2001

Investigators from the National Institute for Occupational Safety and Health (NIOSH) collected air samples in areas immediately adjacent to the debris pile and on personnel actively involved in rescue efforts on or in the vicinity of the debris pile to characterize potential exposures. Below are the interim sampling results for Tuesday, September 25, 2001.

Air Samples

Carbon Monoxide

- 2 real-time personal breathing zone samples were collected for carbon monoxide
  - Both 8-hour time-weighted average concentrations were below 7 ppm
