COMMENTS AND EXPLANATION OF ANY VIOLATIONS *(Reference all attachments here)* Flow at the observation point may be biased high due to other influences, including stormwater runoff from Richmond Avenue, the NYCDOS garage, and groundwater influence. Estimated flow calculated using Manning equation. The method for calculating flow is detailed in the Standard Operating Procedure (IT Corporation SOP SPDES-6) for the Collection of SPDES Storm Water Samples attached to a letter from the NYCDOS to the NYSDEC dated December 16, 1999.
