NYC 9/11 Public Portal Document

WTC Efforts

Representatives from the various agencies that are doing monitoring or are evaluating data for health assessment purposes have been participating in meetings/conference calls to review the data that has been collected. In addition, the group is reviewing the EPA authored plan to address continuing monitoring needs. The group is also providing recommendations on monitoring network needs or changes based on the data that is being reviewed. These recommendations would be taken up the chain of command for approval ultimately by OEM.

As more time passes from the day of the event, the emphasis on the various air issues continues to change. While DEP focuses its monitoring efforts on asbestos, DEC on particulates and EPA on a full range of ambient sampling, ATSDR is taking the lead on the development of an indoor sampling plan and public health evaluations.
